

About Medipense Inc.

Medipense, a Montreal-based health technology company, is the inventor and manufacturer of RxPense®, an integrated, intelligent and connected medication therapy management and remote monitoring system designed for Seniors, Chronic Care Patients, Disabled Veterans, and those with complex medication regimens.

After 4 years of research and development, we are manufacturing and are ready for commercialization.

RxPense® Product Brief

RxPense® is a personal medication dispensing and remote monitoring solution that ensures seniors, disabled veterans or chronic care patients in residences, long-term care facilities or at home, take the correct medications on time and notifies caregivers or health care providers (HCP) if they miss a dose. It also accurately records and documents the consumption of both PRN “as-needed” and OTC medications. It can also capture (through external sensors), monitor and store vitals along with the electronic patient record. Medications are securely locked into the device (physical security) and can only be dispensed when the patient is authenticated at the right time (voice recognition biometrics, RFID or password).

RxPense® is the only device which secures, stores and automates the dispensing of pharmacist-filled and sealed, industry standard weekly multidose blister-packaged medications such as DisPill™, Distrimedic™, Eco-Pill™ and others, through a patented process, and significantly reduces the risk of medication non-adherence. Patients can reliably take their meds, conveniently pre-opened, and remain connected to care, even at home. Worried about double-dosing, over-dosing or under-dosing? The RxPense ensure that missed doses remain locked up and caregivers are always notified.

The RxPense® system includes the RxPense® Hub and Cloud-based Portal working in synergy to better manage and communicate in a value-based care environment. The entire system is HIPAA and PIPEDA compliant.

The RxPense® records consumption as patients take their medications and makes this data available to health care providers and caregivers. The RxPense® does not diagnose, treat or otherwise advise patients about their medical conditions. Rather, the RxPense® serves as a reminder to patients and makes it easier for seniors to take their medications on time.
